

Speedline FAST 12 LS Driver

Adjustability Meets Aerodynamics.

The Fast 12 LS provides extensive adjustability in a very discreet hosel design.

- Golfers can adjust loft and face angle, lie and length.
- The loft can be adjusted up to +/- 1 degree.
- The lie can be adjusted up to +2 degrees. The standard length of the fast 12 LS is 45", but can be adjusted to 45.5".

Adjustable Hosel Configuration

Adjustments should be made from upright perspective, facing clubhead with grip down.

Swing Weight

A removable weight in the back of the club head allows the golfer to change to a lighter weight when the club is lengthened in order to maintain the same swing weight.

Use the 2-gram weight at 45.5" and use the 8 gram weight at 45" to maintain D2 swing weight.

Adding a half inch in length provides increased ball speed, increased launch angle, and additional carry distance.
